What is the path to public_html?

The full system path to public_html is:

```
/home/username/public_html

or

/home/username/www
```

"username" is your cPanel/Linux username

"www" is simply a Linux shortcut (AKA symlink) and some people find it faster to type... Save a few keystrokes!

In your FTP program, the top level folder that you'd see would be /username

You would then upload your index.html file to /username/public_html
