How do I add text to my site?

How to add text to your site using GlowHost's Website Builder.

Adding Text To Your Site

You can easily add text to your pages using the Text Widget. The Text Widget works just like a Word Processor. This can be found under Widgets > Popular. Drag the Text Widget onto your page and you can type directly into it, or copy and paste text into it using from a plain text editor such as Notepad or TextEdit.

You can use the Text Editing Toolbar or the Style Designer to edit the appearance of your text after you have added it to your page.

Never copy and paste from an external source such as another website or a program such as Microsoft Word as this can cause your page to break.
